

Biodegradable Polymers in Various Environments

NOTES

-  proven biodegradability
-  proven biodegradability under certain conditions or for certain grades
-  biodegradability not proven

The biodegradability of plastics derived from these biodegradable polymers can only be guaranteed if all additives and (organic) fillers are biodegradable, too. Dying and finishing of cellulosic fibres, for example, may prevent their biodegradation in the environment.

Biodegradability depends on the complex biogeochemical conditions at each testing site (e.g. temperature, available nutrients and oxygen, microbial activity, etc.). Therefore, these generalised claims about biodegradation can only serve as approximations and need to be confirmed by standardised testing under lab conditions. In-situ behaviour can vary, depending on the mentioned conditions, size of the plastic, grade of the polymer and other factors. For instance, biodegradation testing is often performed after milling, showing the inherent nature of the material to biodegrade. In reality, the same level of biodegradation will be obtained, be it possibly within a different timeframe.

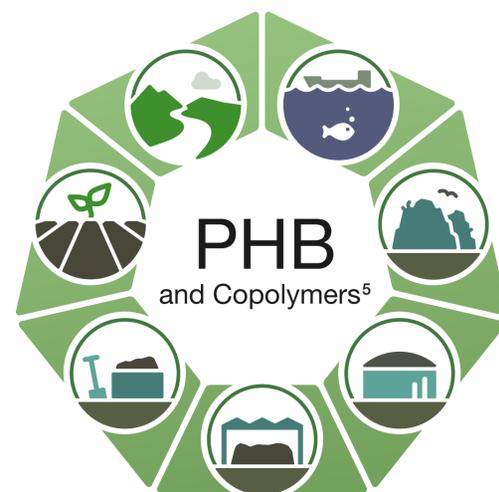

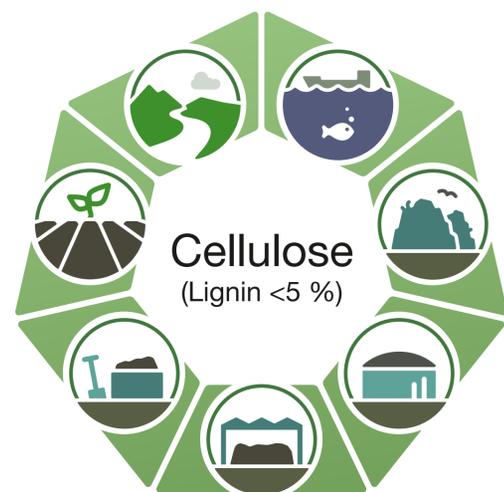

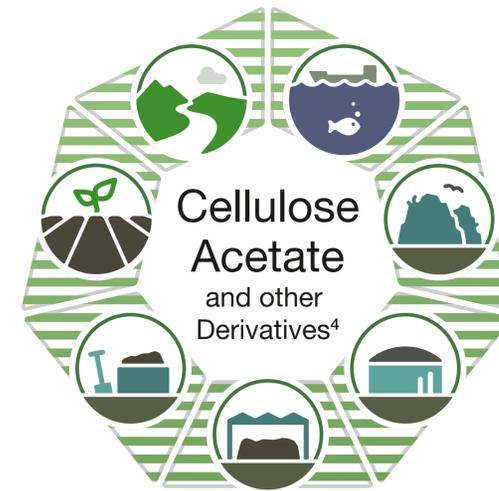

¹ PLA is only likely to be biodegradable in thermophilic anaerobic digestion at temperatures of 52°C.

² Biodegradability in home composting and in soil of PBAT is only proven for certain polymer grades.

³ Complete biodegradation of materials with a high lignin content is not easily measurable with standard biodegradation tests, but does take place (slowly). Instead of CO₂, especially humus is produced by the biodegradation of lignin-rich materials.

⁴ The biodegradation of CA in all environments is only proven for certain polymer grades.

⁵ incl. P3HB, P4HB, P3HB4HB, P3HB3HV, P3HB3HV4HV, P3HB3Hx, P3HB3HO, P3HB3HD

ENVIRONMENTS

Details on test conditions and, if available, applicable pass/fail criteria.

MARINE ENVIRONMENT

Temperature 30°C, 90% biodegradation within a maximum of 6 months (Certification: TÜV AUSTRIA OK biodegradable MARINE (ISO under preparation))

FRESH WATER

Temperature 21°C, 90% biodegradation within a maximum of 56 days (Certification: TÜV AUSTRIA OK biodegradable WATER)

SOIL

Temperature 25°C, 90% biodegradation within a maximum of 2 years (Certification: TÜV AUSTRIA OK biodegradable SOIL; DIN Certco DIN-Geprüft biodegradable in soil)

HOME COMPOSTING

Temperature 28°C, 90% biodegradation within a maximum of 12 months (Certification: TÜV AUSTRIA OK compost HOME; DIN Certco DIN-Geprüft Home Compostable)

LANDFILL

No standard specifications or certification scheme available, since this is not a preferred end-of-life option

ANAEROBIC DIGESTION

Termophilic 52°C / mesophilic 37°C; standard specification not yet available, but 90% generally considered as completely biodegradable

INDUSTRIAL COMPOSTING

Temperature 58°C, 90% biodegradation within a maximum of 6 months (Standard: EN 13432)
